

AKVAFORS

MODERN WATER TREATMENT
SOLUTIONS FOR VILLAS

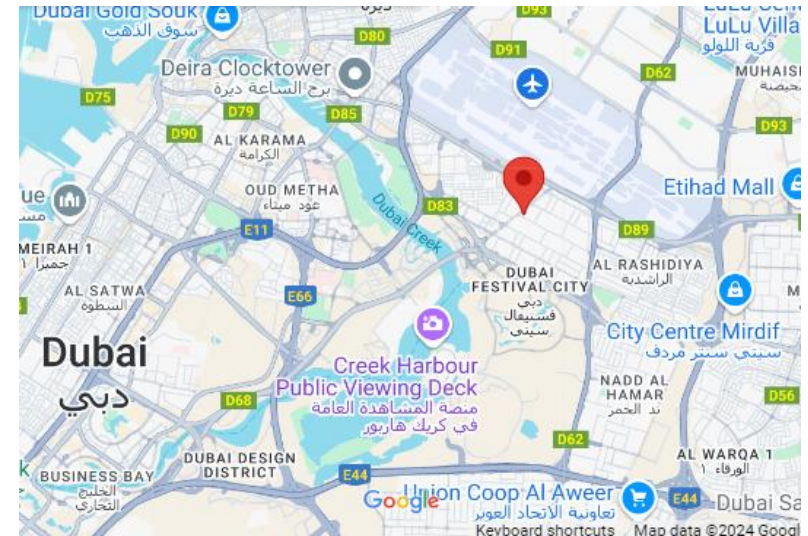

AKVAFORS is the official representative of worlds best brands of water purification and water supply systems. We provide consulting on water treatment, wholesale and retail sales, installation and further maintenance of water treatment systems.

Our main priority is to provide wide opportunities for a profitable and effective solution to water treatment problems for the commercial and industrial sector of any scale and direction.

We develop the most suitable water treatment option in terms of economy and efficiency at your request.

Complex water filtration systems available for any type of business. We provide solutions for softening and iron removal, ultra filtration, deionization, industrial reverse osmosis equipment at the most favorable prices in UAE.

UNDER SINK SYSTEMS

safe and tasty drinking water without boiling

AKV RO SERIES

Our own brand of water purification systems are designed to European quality standards for maximum removal of chlorine and solids, and reduction of hardness. Water of any initial quality is purified to the same level as bottled water.

Filtration rate - up to 60 l/h

ECOSOFT SORPTION SERIES

Economical and compact systems for basic drinking water purification, effectively remove impurities, viruses, chlorine, and heavy metal salts

Filtration rate - up to 1 l/m

HIDROTEK RO PAD

The modern and most compact housing type RO system takes up minimal space, connects to power grid. Systems can be installed both vertically and horizontally. The electronic system controls the water purification process and displays operating parameters on the built-in screen.

Filtration rate - up to 2.5 l/h

DOMESTIC WATER PRE-FILTERS

no more scale or rust

ECOSOFT FOR HOT WATER

The heat-resistant filter housing is resistant to high temperatures—up to 80°C—for purifying hot water from large impurities. It effectively removes sand, silt, rust, scale, and other mechanical contaminants.

Filtration rate - up to 10 l/m

CINTROPUR NW SERIES

Household mechanical sleeve filter for cleaning slightly polluted water. Suitable for effective filtration of solid particles - earth, sand, rust and other impurities. Cleans water from any source. Sleeve filters made of high-quality synthetic materials, suitable for cleaning large water quantities in commercial and private sector. Filters also suitable for drinking water purification.

Filtration rate - up to 18000 l/h

HIDROTEK KFC 01

Five-stage main wall-mounted economical filter with pressure control monitor for deep filtration of large amounts of household water. The system effectively removes impurities, prevents scale formation, UV sterilizer disinfects water.

Filtration rate - up to 15 l/m

CABINET SOFTENERS AND IRON REMOVERS

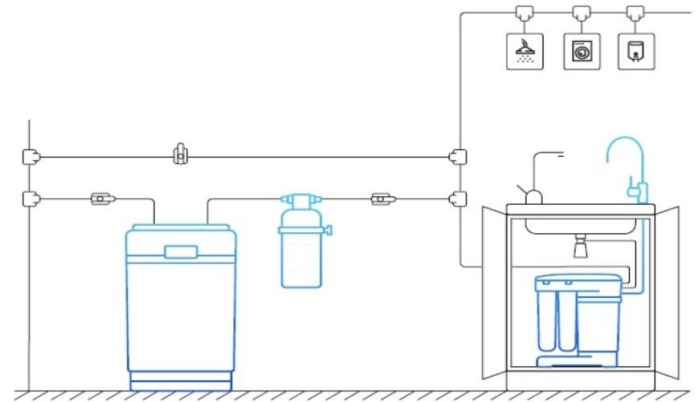

full house water softening

WATERBOSS SERIES

Compact and economical all-in-one softening and filtration system of household water. It's a popular solution for hard water treatment. It has iron and manganese removal functions. The system takes up no more space than a washing machine, so there's no need for a separate utility space.

Filtration rate - up to 2100 l/h

HIDROTEK FC SERIES

An innovative, very compact cabinet softener with adjustable resin regeneration, operates automatically, softens water and controls all operating processes. It doesn't require a separate room, it is easy to install and maintain.

Filtration rate - up to 2000 l/h

WATER PURIFICATION VESSELS

full house water universal filtration

AFM Dryden AQUA

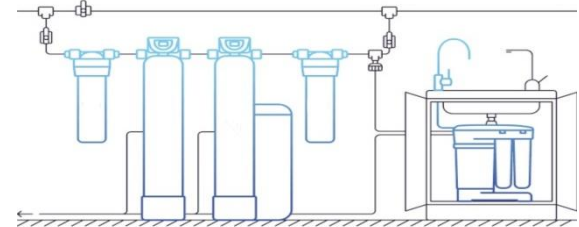

Mechanical filtration and deferrization vessels provides mechanical filtration up to 5 microns and iron removal, based on high-tech AFM filter material.

AF

Mechanical filtration is based on activated carbon. Purify household water from organic impurities, bacteria and unpleasant odors.

MIX

Universal vessels remove iron, softens water and simultaneously removes calcium ions, iron and manganese.

SN

Preliminary mechanical filtration based on gravel and quartz sand.

SF

Softening vessels with manual control unit for complex cleaning, fighting against hard salts, iron, manganese.

SF TWIN / DUPLEX / TRIPLEX

Series of high-performance systems designed for continuous water purification and softening.

Vessels assembled according to individual request

PROFESSIONAL RO SYSTEMS

high quality water purification from any source

ECOSOFT PROFESSIONAL MO SERIES

Energy-efficient and cost-effective reverse osmosis systems deliver maximum performance with minimal energy consumption. These systems handle any water treatment task, even with challenging water. They deliver purified water of a high standard, reaching premium drinking water quality. Their low noise levels and compact size make them ideal for private use. With a reverse osmosis system, your entire home will be supplied with the purest water.

Filtration rate - up to 15000 l/h

DISC WATER FILTERS

pure water without impurities

DISC FILTER 130 MIC SERIES

Washing disc filter used for coarse mechanical filtration of water from medium and large mechanical impurities. Filter effectively removes clay, silt, sand and other impurities up to 130 microns in size. The main filter element of the disc is easily removed, washed and disassembled if necessary.

Filtration rate - 6 – 35 m³/h
